

## **NOFOAM NS 05**

Non-silicone levelling agent

### **Physical-chemical specifications**

Chemical base: solution of organic polymers

Appearance: transparent liquid

Solubility: dispersible in water

### **Characteristics and applications**

**NOFOAM NS 05** is an anti-hydrophobing additive to glaze over digital printed surfaces, developed for bell or vela applications.

Easily dispersed, it significantly reduces surface tension, especially in aqueous systems. It is very efficient, with long lasting effect. It solves many problems of surface unevenness (ripples, dimples, etc...) where glaze is being applied preventing the water repellency digital inks.

**NOFOAM NS 05** will act also as a defoamer of the glaze itself. Recommended ratio: 0,3 – 0,5% calculated on the liquid glaze. Increase step by step if necessary. Leave to stand for a few minutes in to ensure optimum dispersion.

### **Note**

**NOFOAM NS 05** is available in 50 or 100 Kg drums, 1000 Kg IBC tanks.  
If correctly stored, its shelf-life is 1 year.
